

Supply Chain and Continuity Management

Duration:

2 days

Accreditation by:

Business Continuity Institute (BCI)

Audience and Qualification:

Both Business Continuity and Procurement/ Supply Chain professionals who find themselves with conflicting needs and unclear business priorities who would benefit from working more closely together to the ultimate benefit of all their stakeholders.

Objectives:

The course will look at how best to align departmental priorities and form a consistent approach to suppliers, partners and other interested parties in the supply chain. Naturally, the course is entirely consistent with current thinking on risk and resilience measures as well as ISO22301 and the new BCI Good Practice Guidelines (GPG 2013).

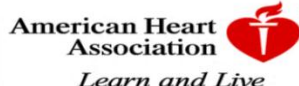

Course Description:

The course, currently the only one of its kind, aims to explore when and how to better develop and integrate the Supply Chain and Continuity Management disciplines and life cycles. All organisations large and small are increasingly dependent on their suppliers, supply chains and outsourced operations to provide vital aspects of their products and services to customers yet suffer from confused internal strategies and policies from departments with historically siloed perspectives.

Key learning points:

- The current Business Continuity/ Supply Chain divide
